NIM

A game for two players. Playing pieces are placed in rows as indicated. Players alternate turns by removing any number from one to all of the playing pieces from any one row. Play continues until all of the pieces have been removed. The player to remove the last piece is the winner.

NOTE:
1. Counters set up as above, 2 players take turns.
2. Players can remove one or more (as many as you like) counters in one row (not column).
3. Doesn’t matter if there is a space between counters.
4. Whoever removes the last counter wins.
